

About Debian

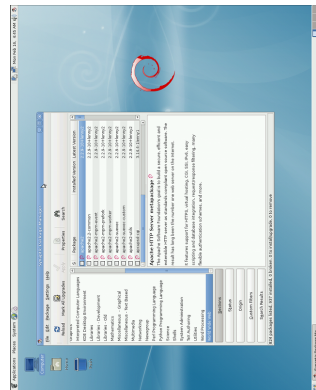

Debian GNU/Linux is a free operating system, developed by more than a thousand volunteers from all over the world who collaborate via the Internet. Debian's dedication to Free Software, its non-profit nature, and its open development model make it unique among GNU/Linux distributions.

The Debian project's key strengths are its volunteer base, its dedication to the Debian Social Contract, and its commitment to provide the best operating system possible. Debian 5.0 is another important step in that direction.

debian GNU/Linux 5.0 "Lenny"

DVD 1

"With a great new kernel, huge desktop updates powered by Firefox 3 and Gnome 2.22, Debian stable has never felt so cutting-edge, and yet you know that millions of hours of work have gone into making it the kind of rock-solid stable that Debian is famous for."

 TUX RADAR February 15, 2009

"Debian is a great fit for server deployments, and is particularly well-suited for hosting applications that draw on open-source components, such as Apache, MySQL, or any of the other thousands of applications that the Debian project has packaged up for easy installation over one of the project's many repository mirror sites."

 eWEEK February 26, 2009

"Put it all-together, and you've got a heck of a solid and attractive Linux distribution."

Give Lenny a try. I think you'll like him."

 COMPUTERWORLD February 17, 2009
